

VersaLED Video Masking System

Transform Your Center

Our new VersaLED Video Masking Systems provides a bright, high definition video masking system for bowling lanes. The system utilizes high resolution LED panels to provide the wow factor for your facility. The VersaLED Video Masking can display all types of high definition video, still images and graphics. This includes cable or satellite television for sporting events, television shows, music videos, digital signage, personal computers, tablets, smart devices and even scoring.

Screens sizes include single lane pair, four lane or for any number of lanes screen sizes.

VersaLED Video Mask is lane supported by our Patent Pending mounting solution.

Replace the boring and cheesy fixed masking unit graphics with a digital LED pallet.

Perfect for new and retrofit applications.

The LED panels can easily be seen in any lighting conditions including with all house lights on. Plus the LED panels are energy efficient and maintenance free. The LED panels have a 100,000 hour life. Gone are the days of replacing expensive projector lamps and filters.

VersaLED Video Masking System Options:

Video Content Management System

A library of videos for incredible eye catchy video effects. Dynamic and content rich digital signage advertising can be created and tailored to communicate your message to various audiences. The large LED screens make it easy to promote in house events and your brand.

Automation Control System

A programmed and password protected touch panel to control the VersaLED Video Mask System, video matrix, cable or satellite receivers and the video content management system. The intuitive touch panel makes operating the entire system simple and easy.

Versa Dynamic Video Processor

The processor provides simple to use presets for several windowing and screen configurations. These include multiple video windows or video images at one time or one giant graphic image over the entire screen.
